Ms. Marlene H. Dortch
Secretary
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Re: Reply Comments, IB Docket No. 11-109

Dear Ms. Dortch:

I sincerely urge the Federal Communications Commission to continue working for a solution to the LightSquared/GPS interference issues because as a consumer, I believe the Commission must do everything it can to stimulate more competition in the wireless sector and put every potentially available spectrum for wireless broadband use.

LightSquared is an established communications provider with sufficient capital and expertise to construct a national next-generation broadband wireless network. Its network would greatly expand our nation's broadband wireless spectrum at a time when demand for wireless data downloads is exploding. As private business owner, I have seen how improved technology improves efficiency and quality of products; and during this difficult economic time, everyone needs all the help they can get.

In addition to LightSquared creating new opportunities, GPS is an important technology that should be protected. Having said that, LightSquared's plan to use its frequencies farthest away from GPS sufficiently protects current users of GPS. The standard must be set such by the continued functionality of current GPS devices as new devices with better filters such as those offered by Qualcomm are implemented throughout the GPS fleet of devices.

In conclusion, I urge the Commission to not squander the chance to utilize a higher, more efficient use for spectrum, especially via a privately funded new national wireless broadband provider. We must continue to move forward and not be impeded because of older technology that can clearly be updated.

Sincerely,

Talita Loyd
